Introducing SmartNet Cat5 AV Switch

What's in the box?

Thank you for buying the Smart-e SmartNet Cat5 AV Switch & Extender. Depending on the configuration of your system various quantities of the parts below may be included in your shipment.

If any of the accessories listed below are missing please contact the Smart-e dealer you purchased products from or contact Smart-e customer support at:

+44 (0) 1306 628264

If you ordered a SmartNet Cat5 Matrix Switch:

Item	Inputs	Outputs	Size	Mains Cables
SNX-48x32 X+	48	32	8U (9U Inc. PSU)	2

If you ordered SmartLynx Digital Audio Receivers:

Item	Description	Multi-Format Video	Digital Audio	Cascade-able
SLX-RX212	Cat5 Receiver Unit	Yes	Yes	No
SLX-RX212D	Cat5 Receiver Unit	Yes	Yes	Yes

Introducing SmartNet Cat5 AV Switch

What is SmartNet?

The SmartNet systems are a combination of high quality video and audio switches, transmitter and receiver devices designed to transmit high resolution computer video and/or audio signals over Cat5 wire. AV stands for Audio Visual and includes such signal formats as Broadcast Video (TV video signal), Computer Video (VGA, SVGA, SXGA and etc. signals) and various formats of Audio signals.

Why is SmartNet necessary?

Sometimes you may have numerous source devices to be displayable upon screens. Or that AV signals need to be transmitted over distances greater than commonly specified product limitations of 5m. In this case several choices are available, but most are expensive and bulky, which is in some cases simply not practical, due to space limitations in the conduits.

The SmartNet allows the transmission of AV signals over a standard Cat5 UTP cable over distances of up to 300m with full IR or RS232 control options. The actual distance is a function of the signal resolution and cable quality. The following is a rough guide to distance and resolution:

Cat5 Cable Length	Maximum Recommended Resolution
200m	UXGA (1600x1200)
200m	1080p (1920x1080)
300m	SXGA (1280x1024)

How does SmartNet work?

The Smart-e SmartNet systems are switch/transmitter and receiver pairs designed to extend video, audio and IR/RS232 signals over (UTP & STP) unshielded & shielded twisted pair category 5 (Cat5) cabling. They are supplied with a UK power supply and consist of: a transmitter with a video input (connectors vary by model), an audio input and a Cat5 output and; a receiver with a cat5 input and corresponding outputs. Certain models are also supplied with looping cat5 outputs, local outputs and/or IR or RS232 connections.

The extended signals depend on the model but supported signals are UXGA, CVBS, YPbPr, Y/C, RGB and RGBS analogue format plus Stereo Analogue & Digital Surround sound Audio. The basic concept behind this product is the ability to encode and decode analogue signal combined with precise line equalization and compensation.

Installation and Operation

1. Preparing for installation

Start installation process by ensuring that all video displays and audio devices are compatible with the computers being used.

This is accomplished by connecting the devices directly to the computer and checking that the devices operate as desired without the SmartNet system.

Install CAT-5 wiring between desired locations. In order to minimize system operation difficulties, avoid routing the system cables near fluorescent lights, air conditioners, or machines that may create electrical noise.

Installation and Operation

2. Connect Transmitter to the signal sources and Matrix

- 2.1 Connect the video output of the source device to the input of the matrix using the applicable interface cable if relevant.
- 2.2 Connect the audio output of the source device to the audio input of the matrix using the appropriate cable.
- 2.3 Connect the digital audio output of the source device to the digital audio input, using a standard RCA cable (Digital audio Input number should correspond to that used for Video from the same source).
- 2.3 If using RS232 or Infra-Red see installation details on the following pages.

Installation and Operation

3. Connecting the Infra-Red Blaster for Source Device control

- 3.1 Using the IR Blaster control cable, attach one end into the IR control port on the rear of the SNX-48x32 and the other end to the rear of the 1U Blaster unit.
- 3.2 Then plug the IR emitter LED into the relevant 3.5mm jack socket on the front of the Blaster unit and position the LED at the device to be controlled. Making sure that the Blaster port number corresponds to the video input number on the SNX-48x32.
- 3.3 See IR output 1 on the Blaster corresponding to video input 1 on the Matrix in the diagram below.

Installation and Operation

4. Controlling the switch with RS232.

- 4.1 Connect the CAB-R19-1M cable supplied to the topmost 'Comms In' RJ45 on the front of the matrix.
- 4.2 Connect the D9 end of the CAB-R19-1M to either of the supplied serial converters.
- 4.3 For a control system with a D9 port use the AL-300.
- 4.4 For a control system with a USB port use the AL-310.
- 4.5 Finally connect the chosen serial converter to your control system using the applicable standard cable [USB or D9].

Installation and Operation

5. Connecting the Power Supplies

- 5.1 On the rear panel of the unit, using the cables supplied link the Canon connector marked PSU 1 to the corresponding connector (also marked PSU 1) on the Power supply directly below it.
- 5.2 Then connect the two Canon connectors marked PSU 2 in the same fashion as above. (see diagram below)

Installation and Operation

6. System Power up

- 6.1 Turn the system on by plugging in the power adapter to the SmartLynx if they are not yet connected (See diagram opposite).
- 6.2 Power up your computer.
- 6.3 Observe both transmitter and receiver power LED are ON, and source device is switched on.

7. Preparing and connecting System CAT-5 cable

The SmartLynx utilizes category 5 [CAT 5], unshielded twisted pair [UTP] cable to transport signal between transmitter and receiver.

CAT 5 cable is more desirable than coaxial cable due to its low cost and ease of installation. This cable is used for LAN applications and is found in abundance, already installed, in many buildings . The category 5 is a standard which establishes minimum requirements for telecommunications cabling within a commercial building. The standard covers various aspects of wiring including telecommunications outlets.

Following is the wiring standard for terminating CAT 5 cable using RJ 45 connector:

Pair 1	Pins 1 & 2
Pair 2	Pins 3 & 6
Pair 3	Pins 4 & 5
Pair 4	Pins 7 & 8

Connectors:	RJ-45
Capacitance:	14 pf/ft (46.2 pf/m)
Conductor Gauge:	24 AWG
Impedance:	100 +/- 15 ohms
	4 - Pair

Receiver Options

8. SmartLynx Receiver Options

There are a number of different receiver options available to accompany the matrix, please check the model number and relevant page number reference below.

SLX-RX100

UXGA, RGBs, YPrPb, Y/C, CVBS and Stereo Audio

For Instructions on Installation of the SLX-RX100 see page..... 11

SLX-RX111

UXGA, RGBS, RGBs, YPrPb, Y/C, CVBS, Stereo Audio and RS232 or Infra-Red control option.

For Instructions on Installation of the SLX-RX111 see page..... 15

SLX-RX211

Same as SLX-RX111 but with greater range and skew compensation.

For Instructions on Installation of the SLX-RX211 see page..... 19

Receiver Options

SLX-RX212SP/D

Dual Screen Output, UXGA, RGsB, YPrPb, Y/C, CVBS and Stereo Audio, with RS232 or Infra-Red control option. SLX-RX212D can be cascaded.

For Instructions on Installation of the SLX-RX212 see page.....25

SLX-RX100

The SLX-RX100 allows for the reception of UXGA, RGB, YPrPb, YUV, Y/C, CVBS and stereo audio, when broadcasted along a single Cat5 UTP cable from a Smart-e transmitter or matrix.

The unit then distributes the received signal to a display via a HD15 connection and to speakers via a 3.5mm mini jack.

Installation and Operation—SLX-RX100

1. Connecting SLX-RX100 to the display device

- 1.1 Making sure that the Cat 5 cable is connected to the matrix / transmitter output, connect the cable to the RJ45 socket on the receiver unit.
- 1.2 If the cable connection is correct the power LED on the front of the receiver should illuminate (power is sent up the Cat 5 cable).
- 1.3 Connect the display to relevant connector on the receiver [see diagram below] using the appropriate cable.

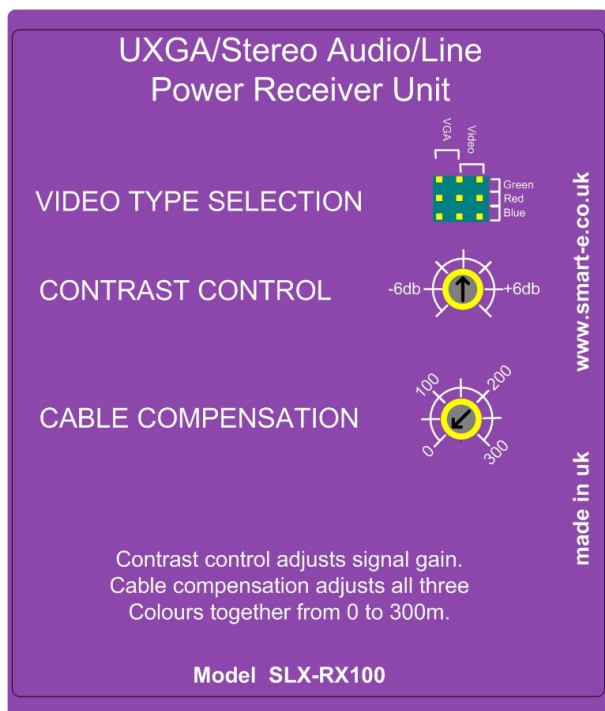

Installation and Operation—SLX-RX100

2. Setting the cable length dials

The Receiver unit is preset for approximately 50m which is sufficiently accurate for most applications. However if the image does not look sharp enough then follow the instructions below

- 2.1 Whilst looking at an image on the display, preferably a long horizontal bar, adjust the CABLE COMPENSATION dial.
- 2.2 Looking at the right-hand edge of the bar you will see the image change. A highlighting bright edge means over compensation, whilst a blurred dark edge means under compensation.
- 2.3 Adjust the dial until both effect are neutralized.

The Contrast control dial is factory pre-set and usually needs no adjustment.

Installation and Operation—SLX-RX100

3. Sync Processing

For VGA applications the Transmitter adds the Horizontal and Vertical Sync Pulses to the Blue and Red channels. However, since the unit has been designed for use with other types of video the Receiver provides the ability to pass both the Red and Blue channels transparently or process them to remove the Sync Pulses.

3.1 For composite, y/c and YP_bP_r [component] the jumpers must be set in the Video position.

3.2 For VGA the jumpers must be set in the VGA position.

The example below shows the jumpers set for composite, s-video or component

SLX-RX111

The SLX-RX111 allows for the Short Range reception of UXGA, RGsB, RGbS, YPrPb, YUV and Long Range reception of Y/C, CVBS, Stereo Audio, and Infra-Red or RS232 control signals, when broadcasted along a single Cat5 UTP cable from a Smart-e transmitter or matrix.

The signals are received along the Cat5 from the transmitter and then distributed to the display and control equipment via the appropriate connection and to speakers via a 3.5 mm mini jack.

Installation and Operation—SLX-RX111

1. Connecting SLX-RX111 to the display device

- 1.1 Making sure that the Cat 5 cable is connected to the transmitter output, connect the cable to the RJ45 socket on the receiver unit.
- 1.2 If the cable connection is correct the power LED on the front of the receiver should illuminate (power is sent up the Cat 5 cable).
- 1.3 Connect the display to relevant connector on the receiver (see diagram below) using the appropriate cable.
- 1.4 If RS232 control is required then connect to the display via the 3.5mm minijack on the receiver using a CAB-J19-1M.

Installation and Operation—SLX-RX111

2. Connecting SLX-RX111 to audio and Infra-Red control

- 2.1 Connect the speakers or audio input on the display to the audio output on the receiver, using a 3.5mm jack plug.
- 2.2 If using the receiver to transmit Infra-Red signals back down the cable to the transmitter unit then connect an 'eye' to the jack position as shown in the diagram below.
- 2.3 If using the receiver to transmit Infra-Red signals up to the display from the transmitter unit then connect a 'LED' to the jack position as shown in the diagram below.

Please note: connecting the IR 'eye' will prevent the return RS232 path from the display

**Cat5 from
Transmitter/
Matrix**

PSU connection is not
required – unit is
powered from the
Cat5 cable

Installation and Operation—SLX-RX111

3. Mounting the Receiver

The receiver unit can compensate for cable losses over a length of 20-100m, and for mounting purposes the unit is provided with two 'mounting-hole' points for fixing to the wall or screen (See diagram below). Simply hold receiver in place, mark position of holes and set screws in these locations.

NB. Always use screws with heads larger than the holes.

SLX-RX211

The SLX-RX211 allows for the Long Range reception of UXGA, RGsB, RGBS, YPrPb, YUV, Y/C, CVBS, Stereo Audio, and Infra-Red or RS232 control signals when broadcasted along a single Cat5 UTP cable from a Smart-e transmitter or matrix.

The signals are received along the Cat5 from the transmitter and then distributed to the display and control equipment via the appropriate connection and to speakers via a 3.5 mm mini jack.

Installation and Operation—SLX-RX211

1. Connecting SLX-RX211 to the display device

- 1.1 Making sure that the Cat 5 cable is connected to the transmitter output, connect the cable to the RJ45 socket on the receiver unit.
- 1.2 If the cable connection is correct the power LED on the front of the receiver should illuminate (power is sent up the Cat 5 cable).
- 1.3 Connect the display to relevant connector on the receiver (see diagram below) using the appropriate cable.
- 1.4 If RS232 control is required then connect to the display via the 3.5mm minijack on the receiver using a CAB-J19-1M.

Installation and Operation—SLX-RX211

2. Connecting SLX-RX211 to audio and Infra-Red control

- 2.1 Connect the speakers or audio input on the display to the audio output on the receiver, using a 3.5mm jack plug.
- 2.2 If using the receiver to transmit Infra-Red signals back down the cable to the transmitter unit then connect an 'eye' to the jack position as shown in the diagram below.
- 2.3 If using the receiver to transmit Infra-Red signals up to the display from the transmitter unit then connect a 'LED' to the jack position as shown in the diagram below.

Please note: connecting the IR 'eye' will prevent the return RS232 path from the display

**Cat5 from
Transmitter/
Matrix**

PSU connection is not
required – unit is
powered from the
Cat5 cable

Installation and Operation—SLX-RX211

3. Adjusting Cable Compensation (Equalization) and Contrast Control

- 3.1 To adjust equalization the 'pot' labelled as Cable Compensation may be rotated clockwise: start by turning the 'pot' completely ANTI-clockwise and then slowly turn clockwise until equalization is correct. As cable length increases the 'pot' will need to be turned further clockwise.
- 3.2 The Contrast Control adjustment (Gain) is factory set at 0dB. Leave at preset unless you require to compensate for another piece of equipment in the chain i.e. old display which has lost brightness.

4. Skew error compensation

The SLX-RX211 has built-in delay lines to compensate for skew errors in longer cable lengths of Cat6 cable. Each video colour can be delayed up to 62ns which can be adjusted and set using the 3 buttons on the base of the unit.

- 4.1 Press buttons 'INC' and 'DEC' together to enter the setting mode.
- 4.2 Press button 'SET' to select the colour to be delayed i.e. red/green/blue (indicated by the respective LED).
- 4.3 Choose the most delayed colour (the one which is to the right of the other colours) and delay the other 2 colours to that position
- 4.4 Press the 'INC' button to increase and 'DEC' button to decrease the delay.
- 4.5 Press buttons 'INC' and 'DEC' together to save the settings.
- 4.6 Pressing buttons 'DEC' and 'SET' together will reset all delays to zero.

Note

Although all 3 colours can be delayed it is usually only necessary to delay 2 of the colours to achieve skew error compensation.

Installation and Operation—SLX-RX211

4a. Incorrect Skew adjustment.

In this example the Red signal is most delayed and the Green signal the least delayed.

4b. Correct Skew adjustment.

In this example colours are in alignment and hence correctly equalized.

Installation and Operation—SLX-RX211

5. Mounting the Receiver

The receiver unit can compensate for cable losses over a length of 20-100m, and for mounting purposes the unit is provided with two 'mounting-hole' points for fixing to the wall or screen (See diagram below). Simply hold receiver in place, mark position of holes and set screws in these locations.

NB. Always use screws with heads larger than the holes.

SLX-RX212SP/D

The SLX-RX212 allows for the Long Range reception of UXGA, RGsB, YPrPb, YUV, Y/C, CVBS, Stereo Audio, and Infra-Red or RS232 control signals when broadcasted along a single Cat5 UTP cable from a Smart-e transmitter or matrix.

The signals are received along the Cat5 from the transmitter and then distributed as a Dual-Screen output to the displays and control equipment via the appropriate connections, and to speakers via a 3.5 mm mini jack.

Installation and Operation—SLX-RX212SP/D

1. Connecting SLX-RX212 to the display device

- 1.1 Making sure that the Cat 5 cable is connected to the transmitter output, connect the cable to the RJ45 socket on the receiver unit.
- 1.2 If the cable connection is correct the power LED on the front of the receiver should illuminate (power is sent up the Cat 5 cable).
- 1.3 Connect the displays to the relevant connectors on the receiver (see diagram below) using the appropriate cable.
- 1.4 If RS232 control is required then connect to the display via the 3.5mm minijack on the receiver using a CAB-J19-1M.
- 1.5 The 24V PSU should be connected to the 2.5mm Female DC Jack adjacent to the RJ45 socket; then plug the PSU into the Mains using the cable provided.

Installation and Operation—SLX-RX212SP/D

2. Connecting SLX-RX212 to audio and Infra-Red control

- 2.1 Connect the speakers or audio inputs on the displays to the audio outputs on the receiver, using 3.5mm stereo mini-jack cables.
- 2.2 Connect the digital audio inputs on your display or amplifier to the digital audio output on the receiver, using a standard RCA coaxial cable.
- 2.3 If using the receiver to transmit Infra-Red signals back down the cable to the transmitter unit then connect an 'eye' to the jack position as shown in the diagram below.
- 2.4 If using the receiver to transmit Infra-Red signals up to the display from the transmitter unit then connect a 'LED' to the jack position as shown in the diagram below.
- 2.5 To connect RS232 use a 3.5mm mini-jack plug to D9 cable,
(can be supplied by Smart-e:
For female D9 - CAB-JDF-1M;
For male D9 - CAB-JDM-1M)

Installation and Operation—SLX-RX212SP/D

3. Adjusting Equalisation and Contrast

- 3.1 To adjust equalization the 'pot' labelled as EQ may be rotated clockwise: start by turning the 'pot' completely ANTI-clockwise and then slowly turn clockwise until equalization is correct. As cable length increases the 'pot' will need to be turned further clockwise.
- 3.2 To adjust contrast [Gain] as with equalization begin by turning the 'pot' completely ANTI-clockwise and slowly turn the 'pot' clockwise until the desired image contrast [Gain] is displayed.

4. Skew error compensation

The SLX-RX212 has built-in delay lines to compensate for skew error in longer cable lengths. Each video colour can be delayed up to 62ns which can be adjusted and set using the 3 buttons on the base of the unit.

- 4.1 Press buttons 'INC' and 'DEC' together to enter the setting mode.
- 4.2 Press button 'SET' to select the colour to be delayed i.e. red/green/blue.
- 4.3 Press the 'INC' button to increase and 'DEC' button to decrease the delay.
- 4.4 Press buttons 'INC' and 'DEC' together to save the settings.
- 4.5 Pressing buttons 'DEC' and 'SET' together will reset all delays to zero.

Note

Although all 3 colours can be delayed it is usually only necessary to delay 2 of the colours to achieve skew error compensation.

Installation and Operation—SLX-RX212SP/D

4a. Incorrect Skew adjustment.

In this example the Green is under equalized and the Red is slightly over equalized.

4b. Correct Skew adjustment.

In this example colours are in alignment and hence correctly equalized.

Installation and Operation—SLX-RX212SP/D

5. Setting the jumpers on the Receiver

- 5.1 On the SLX-RX212 you are able to select the format of video outputted by the HD15s by altering the jumpers on the base of the unit shown in the diagram below.

Viewed from underside of board [where the pots reside]

Video on Second HD15:

Video on Both HD15s:

Installation and Operation—SLX-RX212D

6. How to Cascade the SLX-RX212D

- 6.1 As well as having all the functions of the regular SLX-RX212, the SXL-RX212D also has the ability to be cascaded for up to 5 units.
- 6.2 In order to cascade the SLX-RX212Ds Cat5 cable should be used to join together the supplementary units, with the Cat5 output on the first unit to be joined to the Cat5 input on the second unit, etc. (See diagram below).
- 6.3 All additional SLX-RX212Ds connected after the initial unit, **MUST** have their own power supply units attached.

- 6.4 All SLX-RX212Ds then connect to display and audio equipment as shown for the standard unit on the previous pages.

Installation and Operation—SLX-RX212SP/D

7. Mounting the Receiver

The receiver unit can compensate for cable losses over a length of 20-100m, and for mounting purposes the unit is provided with two 'mounting-hole' points for fixing to the wall or screen (See diagram below). Simply hold receiver in place, mark position of holes and set screws in these locations.

NB. Always use screws with heads larger than the holes.

Connector..... 3.5mm mini-jack, Female

Power

Requirement - Connector..... 24VDC 500mA - 5mm x 2.1mm

Dimensions

Size..... 120 x 94 x 26 mm
Weight..... 0.2kg

Troubleshooting

No video?

- 1) Are the green LEDs on both the transmitter and receiver units? If not check that the 24V power supply (PSU) is connected and the LED on the PSU is lit. Check the cable compensation dials on the underside of the unit. Over compensation of the Red and Blue channels can cause the display to misinterpret the sync pulses and not display an image.
- 2) Is the video source a laptop or floating? (a floating source is one which has no earth reference i.e. uses a double insulated PSU or a figure 8 mains cable). If so make sure the PSU is an earthed unit when not using the PSU supplied.
- 3) Is the audio input level too high? The audio level should be set to line level (0dB or 700mV peak to peak) to prevent interference.

Display has problems syncing?

- 1) Is the audio input level too high? The audio level should be set to line level (0dB or 700mV peak to peak) to prevent interference.

Appendix

Limited Warranty Statement

A. Extent of limited warranty

1. Smart-e (UK) Ltd warrants to the end-user customers that Smart-e product specified above will be free from defects in materials and workmanship for the duration of 3 years, which duration begins on the date of purchase by the customer. Customer is responsible for maintaining proof of date of purchase.
2. Smart-e warranty covers only those defects which arise as a result of normal use of the product, and do not apply to any:
 - a. Improper or inadequate maintenance or modifications
 - b. Operations outside product specifications
 - c. Mechanical abuse and exposure to severe conditions
3. If Smart-e receives during applicable warranty period notice of defect, Smart-e will at its discretion replace or repair defective product . If Smart-e is unable to replace or repair defective product covered by the Smart-e warranty within reasonable period of time Smart-e shall refund the cost of the product.
4. Smart-e shall have no obligation to repair, replace or refund unit until customer returns defective product to Smart-e.
5. Any replacement product could be new or like new, provided that it has functionality at least equal to that of the product being replaced.
6. Smart-e warranty is valid in any country where the covered product is distributed by Smart-e.

B. Limitations of warranty

TO THE EXTENT ALLOWED BY LOCAL LAW, NEITHER SMART-E NOT ITS THIRD PARTY SUPPLIERS MAKE ANY OTHER WARRANTY OR CONDITION OF ANY KIND WHETHER EXPRESSED OR IMPLIED , WITH RESPECT TO THE SMART-E PRODUCT , AND SPECIFICALLY DISCLAIM IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY, SATISFACTORY QUALITY , AND FITNESS FOR A PARTICULAR PURPOSE

C. Limitations of liability

To the extent allowed by local law the remedies provided in this warranty statement are the customers sole and exclusive remedies

TO THE EXTENT ALLOWED BY LOCAL LAW , EXCEPT FOR THE OBLIGATIONS SPECIFICALLY SET FORTH IN THIS WARRANTY STATEMENT , IN NO EVENT WILL SMART-E OR ITS THIRD PARTY SUPPLIERS BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES WHETHER BASED ON CONTRACT , TORT OR ANY OTHER LEGAL THEORY AND WHETHER ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

D. Local law

To the extent that this warranty statement is inconsistent with local law, this warranty statement shall be considered modified to be consistent with such law

Partial Product List

Product Range	Product Code	Description
SmartLynx - X	SLX-100	Transmitter and Receiver Pair
	SLX-400	Transmitter and Receiver Pair
SmartLynx-X +	SLX-111	Transmitter and Receiver Pair with RS232/IR
	SLX-211	Transmitter and Receiver Pair with RS232/IR
	SLX-212	Dual Transmitter and Receiver Pair with RS232/IR
SmartCast - X	SCX-TX600	One to Six Transmitter Unit
SmartCast-X+	SCX-TX550	One to Five Transmitter Unit with RS232/IR
SmartCast System	TUSC-1042	SmartCast Eurocard Rack (Up to 16 cards)
	SCX-TX120E	Dual Screen Transmitter Eurocard
	SCX-TX550E	One to Five Transmitter Eurocard with RS232/IR
	SLX-RX100ES	Eurocard Receiver for UGXA,YUV,Y/C, and Audio
SmartNet-X+ Matrix Switches	SNX-8x8+	8 x 8 Distribution Matrix
	SNX-16x16+	16 x 16 Distribution Matrix (Up to 256 x 256)
SmartNet-X+ Matrix Bundles	SNX-8X8IRP	Complete Infrared Controlled 8X8 Matrix Package
	SNX-8X8RSP	Complete RS232 Controlled 8X8 Matrix Package
